

## Carbonic Anhydrase (CA) Activity Assay Kit (Colorimetric)

### Product Information

---

**Cat**

Kit-1116

---

**Cat.No.**

Kit-1116

---

**Description**

Carbonic anhydrases (CA) (CA, 4.2.1.1) are zinc enzymes present in both prokaryotes and eukaryotes. They catalyze efficiently the reversible hydration of CO<sub>2</sub> to bicarbonate. Their important patho-physiological roles in respiration, pH and CO<sub>2</sub> homeostasis, secretion, gluconeogenesis, ureagenesis etc. make it an important drug target. Characteristic increase and decrease of CA Activity is observed in different physiological conditions and diseases such as anemia, Thalassemia, Hypothyroidism, Hyperthyroidism, in several cases of lung and liver diseases and Leukemia. CA Activity Assay Kit can be used to measure CA activity in biological samples like serum and hemolysates. The assay utilizes the esterase activity of an active CA on an ester substrate which releases a chromophore. The released product can be easily quantified using an absorbance microplate reader. In the presence of a CA specific inhibitor, the enzyme loses its activity which results in a decrease of absorbance. This assay kit is simple and can be used to measure CA activity in biological samples like hemolysate, serum and purified CA activity, CA activity in biological samples like hemolysate and serum in a high-throughput format. To measure the Specific CA activity we have used the specific inhibitor Acetazolamide, which is a potent inhibitor of CA I, CA II, CA IV, CA IX, CA XII etc. except CA III.

---

**Applications**

Detection of CA activity in hemolysates, serum;  
Determination of enzymatic activity of purified CA

---

**Storage**

-20°C

---

**Shipping**

---

## Carbonic Anhydrase (CA) Activity Assay Kit (Colorimetric)

Gel Pack

### Size

100 assays

### Kit Components

CA Assay Buffer; CA Dilution Probe; CA Positive Control; CA Substrate; CA Inhibitor (20 mM Acetazolamide); Nitrophenol Standard (2 mM)

### Target Species

Mammalian

**Detection method** Detection method - Colorimetric (OD 405 nm)

### Features & Benefits

Simple, highly sensitive, high-throughput compatible;

Easy protocol for the detection and quantification of active CA;

Kit includes Acetazolamide, a CA inhibitor, and a stable, recombinant human CA
