

Apoptotic Cell Isolation Kit

Product Information

Cat.No.

Kit-0102

Product Overview

Apoptotic Cell Isolation Kit is used for apoptotic cells isolation or removal of dead cells from cell culture or tissue preparations using annexin V/magnetic beads.

Description

The Apoptotic Cell Isolation Kit provides a simple and efficient means for isolation of apoptotic cells or removal of dead cells from cell culture or tissue preparations using annexin V/magnetic beads. Annexin V is a Ca²⁺-dependent phospholipid binding protein with high affinity for phosphatidylserine (PS), which is redistributed from the inner to the outer plasma membrane leaflet in apoptotic or dead cells. Once on the cell surface, PS becomes available for binding to annexin V and any of its conjugates. Binding of annexin V-biotin to apoptotic cells followed by binding of the biotin to streptavidin- MagBeads enables separation of apoptotic cells from living cells. The apoptotic cells bound to the MagBeads adhere to the magnet, while nonapoptotic cells stay in suspension. The separated apoptotic and healthy cells can then be used in a variety of assays to study apoptotic mechanisms and pathways. The kit has also been successfully used to remove dead cells from healthy cell culture. This kit has been configured for research use only and is not for diagnostic and clinical use.

Target Species

Mammals

Usage

For research use only (RUO)

Storage

For short term, store all components at 4°C. For long term, store at -20°C.

Kit Components

CREATIVE **BIOMART**[®]
Assay Kit

Apoptotic Cell Isolation Kit

Annexin V-Biotin 150 μ l 1X Binding Buffer 25 ml Streptavidin-MagBeads 1.5 ml Apoptotic Cell Releasing Buffer 10 ml

Compatible Sample Types

Cell
