

ER Beta Competitor Assay Kit, Green

Product Information

Cat

Kit-0926

Common Name

ER

Cat.No.

Kit-0926

Description

The ER Beta Competitor Assay Kit provides a sensitive and efficient method for high-throughput, fluorescence polarization-based screening of potential estrogen receptor (ER) beta ligands. The kit uses insect cell-expressed, full-length, native (untagged) human ER beta (A15664) and a novel, high-affinity, fluorescent estrogen ligand (ES2) in a homogenous, mix-and-read assay format.

This kit produces a green color read-out; a "red" kit is also available (A15891). Both kits suitably determine the IC50s of competitive compounds. Color choice depends on the spectral properties of the compounds to be screened and the available instrumentation.

The ER Beta Competitor Assay Kit is:

- Complete & ready-to-use out of the box—all reagents included, just add your test compounds
- High throughput compatible—20 µL fluorescence polarization assays in a 384-well plate
- Convenient—available in bulk sizes for larger screening needs

How the Assay Works

Full-length ER beta is added to a fluorescent estrogen ligand to form an ER-ES2 complex. This complex is added to individual test compounds in multiwell plates. To determine relative affinity, the assay measures fluorescence polarization. Competing test compounds will displace the ES2 ligand from ER beta, permitting it to tumble rapidly and resulting in low polarization values. A shift in the fluorescence polarization value in the presence of test compound is used to determine the relative affinity of test compounds for ER beta.

All components are manufactured under the strictest quality parameters. This product's

ER Beta Competitor Assay Kit, Green

performance, per the Certificat of Analysis, is guaranteed for 6 months after purchase. Contact us for bulk quantities or for assistance with other nuclear receptor assay needs, from assay development to library screening and beyond.

Applications

Nuclear Receptor Assay

Storage

1 tube of ER Beta Human Recombinant Protein, Full Length (store at -68 to -85°C)

1 tube of Fluomone ES2 (store at -5 to -30°C)

1 tube of ES2 Screening Buffer (store at room temperature)

Size

2,500 assays
