

## cGMP Direct Immunoassay Kit

### Product Information

#### Cat.No.

Kit-0212

#### Product Overview

cGMP Direct Immunoassay Kit is used for determining cGMP level.

#### Description

Adenosine and guanosine 3",5"-cyclic monophosphate (cAMP and cGMP) are important "second messengers" involved in many physiological processes. The cGMP Direct Immunoassay Kit provides a direct competitive immunoassay for sensitive and quantitative determination of cGMP level in biological samples. The kit utilizes the recombinant Protein G coated plate to anchor cGMP polyclonal antibody. cGMP-HRP conjugates directly competes with cGMP from samples for binding to the cGMP specific antibody on the plate. After incubation and washing, the amount of cGMP-HRP bound to plate can easily be determined by reading OD450 nm. The intensity of OD450 nm is inversely proportional to the concentration of cGMP in samples. The kit provides a new acetylation procedure that improves detection signal significantly. The kit can detect 0.04 -10 pmol/well (0.008 - 2  $\mu$ M) cGMP samples.

#### Target Species

Mammals

#### Usage

For research use only (RUO)

#### Storage

The kit should be stored at -20°C. After reconstitution, some components may be stored at 4°C as instructed above, stable for up to 1- 2 months. Component Storage 10X cGMP Assay Buffer 4°C Standard cGMP (10 nmol) -20°C Neutralizing Buffer 4°C Acetylating Reagent A 4°C Acetylating Reagent B\* 4°C Anti-cGMP pAb/BSA -20°C cGMP-HRP/BSA -20°C HRP Developer 4°C Protein G Coated Plate -20°C\* Note: Acetylating Reagent B is very volatile and hence the vial has to be tightly capped and stored only at 4°C.
