

D-Lactate Colorimetric Assay Kit

Product Information

Cat.No.

Kit-0291

Product Overview

D-Lactate Assay Kit (Colorimetric) is used for measuring D-lactate.

Description

D-Lactate production in mammals, mainly due to the glyoxalase pathway, is extremely low, with normal serum concentrations in the nano to micromolar range. Typically, elevated D-lactate levels which can rise to millimolar levels, are due to bacterial infection or short bowel syndrome in humans. Abnormally high concentrations of D-lactate are considered indicative of sepsis, ischemia or trauma. Due to slow metabolism and excretion, high D-lactate can cause acidosis and encephalopathy. The D-Lactate Assay Kit (Colorimetric) provides a fast, easy way to accurately measure D-lactate in a variety of biological samples. In the D-Lactate Assay Kit, D-lactate is specifically oxidized by D-lactate dehydrogenase and generates proportional color ($\lambda_{max} = 450$ nm). The kit detects D-Lactate in samples such as serum, plasma, cells, culture and fermentation media. The useful concentration range in samples is 0.01 mM – 10 mM D-lactate.

Target Species

Mammals

Usage

For research use only (RUO)

Storage

Store the kit at -20°C.

Kit Components

D-Lactate Assay Buffer 25 ml
D-Lactate Enzyme Mix: lyophilized 1 vial
D-Lactate Substrate Mix: lyophilized 1 vial
D-Lactate Standard (100 mM) 100 μ l

Detection method Colorimetric

CREATIVE **BIOMART**[®]
Assay Kit

D-Lactate Colorimetric Assay Kit

Compatible Sample Types

Biological Fluid, Cell Culture Supernatant, Fermentation Medium, Plasma, Serum, Tissue Culture Supernatant, Urine
