

Histone Acetyltransferase Inhibitor Screening Assay Kit

Product Information

Cat.No.

Kit-0411

Product Overview

Histone Acetyltransferase Inhibitor Screening Kit provides a fast, fluorescence-based method for evaluating pCAF HAT inhibitors. The procedure is based on the ability of 7-diethylamino-3-(4"-maleimidylphenyl)-4-methylcoumarin (CPM) to react with free thiol groups present after the acetylation reaction. The reaction of the CPM reacts these free thiol groups forms a highly fluorescent product that is detected using excitation and emission wavelengths of 360-390 nm and 450-470 nm, respectively.

Applications

Functional Studies

Storage

Store kit as given in the table upon receipt and away from light. Observe the storage conditions for individual prepared components in sections 9 & 10. The components of the kit are Stable for 6 months when stored properly. For maximum recovery of the products, centrifuge the original vial prior to opening the cap.

Kit Components

Components 96 tests 96-Well Plate (white) 1 unit 96-Well Plate Cover 1 unit HAT Acetyl CoA 1 vial HAT Assay Buffer (5X) 1 vial HAT Developer 1 vial HAT Peptide 1 vial HAT Stop Reagent 1 vial Histone Acetyltransferase (pCAF) 1 vial
