

Hydroxyproline Colorimetric Assay Kit

Product Information

Cat.No.

Kit-0472

Product Overview

Hydroxyproline Assay Kit (Colorimetric) is designed to measure hydroxyproline.

Description

Hydroxyproline (4-hydroxyproline, Hyp) is a common nonproteinogenic amino acid. It is found only in collagen and elastin in mammals but exists in a number of other proteins in plants. Hydroxyproline is formed only as a post-translational modification in the peptide chain and proline hydroxylase does not hydroxylate free proline. Hydroxyproline in tissue hydrolysates is a direct measure of the amount of collagen or gelatin present. A variety of disease states are believed to affect collagen turnover and can cause elevated serum or urine hydroxyproline. Such conditions range from neoplastic, inflammatory, renal or bone disease to endocrine and autoimmune disorders. Hydroxyproline Assay Kit is designed to measure hydroxyproline in tissue or protein/peptide hydrolysates. It can be used to measure hydroxyproline from other biological samples such as serum or urine if they have undergone a prior purification process. It is an easy, convenient method which results in a chromogen with an absorbance maximum at 560 nm. The assay is useful over the range of 0.1-2 µg.

Applications

Measurement of hydroxyproline in various tissues or protein/peptide hydrolysates, serum & urine.

Target Species

Mammals

Usage

For research use only (RUO)

Storage

Store the kit at -20°C, protected from light.

CREATIVE **BIOMART**[®]
Assay Kit

Hydroxyproline Colorimetric Assay Kit

Kit Components

Oxidation Buffer 10 mL Chloramine T Concentrate 0.6 mL Perchloric acid/Isopropanol Solution 5 mL DMAB Concentrate (in DMSO) 5 mL Hydroxyproline Standard (1 mg/mL) 0.1 mL

Detection method Colorimetric

Compatible Sample Types

Animal tissues, Protein/Peptide hydrolysates, Serum, Urine
