

Human NFκB p50 Transcription Factor Assay Kit

Product Information

Cat.No.

Kit-0620

Product Overview

Human NFκB p50 Transcription Factor Assay Kit is a non-radioactive, sensitive method for detecting specific transcription factor DNA binding activity in nuclear extracts and whole cell lysates. A 96-well enzyme-linked immunosorbent assay (ELISA) replaces the cumbersome radioactive electrophoretic mobility shift assay (EMSA). A specific double stranded DNA (dsDNA) sequence containing the NFκB response element is immobilized onto the bottom of wells of a 96-well plate. NFκB contained in a nuclear extract, binds specifically to the NFκB response element. NFκB (p50) is detected by addition of specific primary antibody directed against NFκB (p50). A secondary antibody conjugated to HRP is added to provide a sensitive colorimetric readout at 450 nm. The kit detects Human NFκB (p50). It will not cross-react with NFκB (p65).

Target Species

Reacts with: Human

Kit Components

Components: 96 tests; 96-Well Plate Cover: 1 unit; Polysorbate 20: 1 vial; Transcription Factor Antibody Binding Buffer (10X): 1 x 3ml; Transcription Factor Binding Assay Buffer (4X): 1 x 3ml; Transcription Factor Developing Solution: 1 x 12ml; Transcription Factor Goat Anti-Rabbit HRP Conjugate: 1 x 100µl; Transcription Factor NFκB (Human p50) Positive Control: 1 vial; Transcription Factor NFκB (Human p50) Primary Antibody: 1 vial; Transcription Factor NF-κB 96-Well Strip Plate: 1 unit; Transcription Factor NFκB Competitor dsDNA: 1 vial; Transcription Factor Reagent A: 1 x 120µl; Transcription Factor Stop Solution: 1 x 12ml; Wash Buffer Concentrate (400X): 1 x 5ml

CREATIVE **BIOMART**[®]
Assay Kit

Human NFκB p50 Transcription Factor Assay Kit

Compatible Sample Types

Cell culture extracts, Cell Lysate
