

# Phosphatidylserine Apoptosis Kit (Blue Fluorescence 405)

## Product Information

### Cat.No.

Kit-0740

### Product Overview

Phosphatidylserine Apoptosis Kit (Blue Fluorescence 405) is a fluorescent assay used to monitor cell apoptosis through measuring the translocation of phosphatidylserine.

### Description

Annexins are a family of calcium-dependent phospholipid-binding proteins. They are abundant in eukaryotic organisms belonging to a family of ubiquitous cytoplasmic proteins involved in signal transduction. Annexin V's preferential binding partner is phosphatidylserine (PS), which is usually kept on the inner-leaflet (the cytosolic side) of cell membranes. In apoptosis, PS is transferred to the outer leaflet of the plasma membrane. The appearance of phosphatidylserine on the cell surface is a universal indicator of the initial/intermediate stages of cell apoptosis and can be detected before morphological changes can be observed.

### Applications

This kit is a set of tool for monitoring cellular functions, which are designed to monitor cell apoptosis through measuring the translocation of phosphatidylserine.

### Usage

For research use only (RUO)

### Storage

Keep at 4 °C and avoid exposure to light.

### Kit Components

Component A: Apopxin Violet 450 (100X stock solution) 200 &mu;L  
Component B: Assay Buffer 50 mL  
Component C: 100X Propidium Iodide 100 &mu;L

**Detection method** Fluorometric

### Compatible Sample Types

CREATIVE **BIOMART**<sup>®</sup>  
Assay Kit

## Phosphatidylserine Apoptosis Kit (Blue Fluorescence 405)

Cells

### Features & Benefits

Non-Radioactive: No special requirements for waste treatment. Convenient: All essential assay components are included. Optimized Performance: Provide optimal conditions for detecting the translocation of phosphatidylserine. Enhanced Value: Less expensive than the sum of individual components.
