

G9a Homogeneous Assay Kit

Product Information

Cat.No.

Kit-1734

Product Overview

G9a is a histone methyltransferase that exhibits methylation activity toward H3-K9.

Size

384 reactions

Description

The G9a Homogeneous Assay Kit is designed to measure the activity of G9a (also known as EHMT2 or KMT1C) for screening and profiling applications, using AlphaLISA technology. The key to the G9a Homogeneous Assay Kit is a highly specific antibody that recognizes methylated substrate. With this kit, only three simple steps on a microtiter plate are required for methyltransferase detection. First, a sample containing G9a enzyme is incubated with the biotinylated substrate for one hour. Next, acceptor beads and primary antibody are added, then donor beads, followed by reading the Alpha-counts.

Applications

Great for studying enzyme kinetics and screening small molecular inhibitors for drug discovery and HTS applications.

Storage

12 months from date of receipt, when stored as directed. Kit components require different storage conditions. Be sure to store each component at the proper temperature upon arrival.

Kit Components

G9a enzyme: 10 µg; -80°C 100 µM S-adenosylmethionine: 500 µl; -80°C Primary antibody 5: 25 µl; -80°C Biotinylated histone H3 peptide substrate: 10 µl; -80°C 4x HMT assay buffer 1: 3 ml; -20°C 4x Detection buffer: 2 ml; -20°C
