

# Bovine/Small Ruminant FMDV Serotypes A and O Antibody Detection Kit

## Product Information

---

### Product Overview

---

Virus Antibody Detection Kits

---

### Description

---

Designed for the simultaneous detection of antibodies against Foot-and-Mouth Disease Virus (FMDV) Serotypes A and O in bovine and small ruminant samples.

---

### Size

---

48t/96t

---

### Applications

---

- Monitoring FMDV exposure in cattle, sheep, and goats
  - Post-vaccination antibody evaluation
  - Regional disease control initiatives
- 

### Features & Benefits

---

- Dual-serotype detection in one test
  - Suitable for both bovine and small ruminant serum
  - High-throughput compatibility
  - Time-saving and cost-effective for mixed livestock
-
