

Feline Parasite Triple Nucleic Acid Detection Kit (*Giardia lamblia*, *Cryptosporidium* & *Trichomonas foetus*)

Product Information

Product Overview

Multiplex Nucleic Acid Detection Kits for Cats

Description

Giardia lamblia, *Cryptosporidium*, and *Trichomonas foetus* are parasitic organisms that can infect felines. *Giardia lamblia* and *Cryptosporidium* are known to cause diarrhea, while *Trichomonas foetus* may lead to reproductive issues in cats. Cats infected with *Giardia lamblia* or *Cryptosporidium* may exhibit symptoms such as diarrhea, weight loss, and vomiting. In some cases, the infection may cause bloody stools. In more severe instances, these parasites can also lead to dehydration.

Trichomonas foetus infection may result in reproductive problems, including infertility and miscarriage. In male cats, it may cause inflammation of the reproductive organs and a decrease in sperm count. Female cats may develop inflammation of the uterus and cervix. However, some infected cats may remain asymptomatic.

Size

4 tests/box

Applications

- For detection in anal swabs and fecal samples.
- Fecal samples should be briefly centrifuged to remove debris.
- Suitable for qualitative detection of *Giardia lamblia*, *Cryptosporidium*, *Trichomonas foetus*, and feline 28S ribosomal DNA.

Assay time

<1h 30m

Technical Notes

Feline internal control: 28S rDNA
