

Cysteine (Cys) Content Assay Kit

Product Information

Product Overview

Significance of Measurement: Proteins contain three sulfur-containing amino acids: methionine, cystine, and cysteine (Cys). Cys is the only sulfur-containing amino acid with a thiol group and is derived from methionine. It plays a critical role in disulfide bond formation and often constitutes active sites of proteins. Cys also provides sulfhydryl groups for various physiological and biochemical reactions and is involved in skin metabolism and antioxidant defense.

Principle of Measurement: Cysteine reduces phosphotungstic acid to form tungsten blue, which exhibits a characteristic absorption peak at 600 nm. Cysteine content is calculated by measuring absorbance at 600 nm.

Size

100†/96s

Storage

Store at 2–8 °C. Shelf life: 6 months.

Detection method Spectrophotometer/Microplate Reader

Materials Required but Not Supplied

Cysteine reduces phosphotungstic acid to form tungsten blue, which exhibits a characteristic absorption peak at 600 nm. Cysteine content is calculated by measuring absorbance at 600 nm.
