

Food Nitrite Content Assay Kit

Product Information

Product Overview

The Food Nitrite Content Assay Kit is designed for the quantitative determination of nitrite levels in food samples. Based on a specific colorimetric reaction, nitrite forms a stable chromogenic compound that can be measured spectrophotometrically. The kit offers good sensitivity and reproducibility, making it suitable for food safety testing, quality control, and regulatory compliance analysis.

Size

50t/48s

Storage

Store at 2–8 °C. Shelf life: 6 months.

Detection method Spectrophotometer
